

Auto Adjust Clutch Cables

First Line offer one of the largest Cables programmes in the UK Aftermarket including Brake, Clutch, Accelerator, Speedometer and a comprehensive range of Gear Control Cables to suit all your customers needs.

All the Cables in the range are manufactured to the highest of standards and undergo rigorous testing to ensure premium quality, reliability and long life. Backed up with a 2 year / 24,000 mile warranty customers can have complete peace of mind.

To combat the problems caused by broken clips during transit, First Line have introduced an improved design of Auto Adjust Clutch Cables where the auto-adjust mechanism is fitted at the end of the cable.

The new patented design has been developed using the highest technology available to achieve the best performance from the auto adjusting mechanism. It specifically features a special double wire (trapezoidal and round) conduit to increase the compression resistance which will result in a more effective stroke of the inner cable. The most notable difference is the plastic covering of the auto-adjust mechanism, this covering will prevent rust and corrosion increasing the longevity of the mechanism, it also removes the requirement for the plastic clips seen on the older designs.

Old design - features a clip that needs removing during fitment.

New design - features a plastic covering which prevents against rust.

The following references are supplied with the modified design:

FKC1476 / FKC1322 / FKC1320 / FKC1321

FKC1479 Upgraded Packaging

Where the auto-adjust mechanism is fitted in the middle of the cable, the older design is still used. However, First Line have covered the plastic clip with extra padding to prevent damage of the clip during transit. This will need removing prior to fitment.
