

## Cost-effective repair solutions!

The axle mounting bush for rear axle beams on the Renault Kangoo I with torsion bar suspension is not available individually from the manufacturer. In the past, if the bearing failed, it always had to be replaced together with the complete rocker bar (Fig. 1) because it could only be purchased as part of a repair kit.

**Fig. 1**

febi bilstein has the solution for a timely and efficient repair:

**The axle mounting bush is now available individually.**

**febi no. 23777**  
**Repl. no. 77 00 301 255**  
**Fits Renault Kangoo I**

This saves your customer money, as it is cheaper to replace a single component than a complete unit.

### Important!

The axle mounting bushes are also the focus of all major inspections (MOT). Since the vehicle in question is also designed for an increased weight, its bearings are subject to particularly high stress.

**Simply ask for spare parts by febi bilstein.**  
**The complete range can be found at: [www.febi.com](http://www.febi.com)**
