

Clutch Release Forks for DAF Trucks

The clutch release fork is exposed to frequent strain and is correspondingly susceptible to wear. DAF clutch forks febi 29581, 40169 and 40541 cover a wide range of models up to and including the current Euro 6 generation of the CF and XF.

Important

In the case of a highly stressed part such as the clutch release fork, maximum emphasis should be placed on quality. Premature failure can result in high secondary costs as the vehicle is no longer roadworthy. It is also necessary to dismantle the transmission in order to replace the clutch release fork which requires significant time input and expenditure.

febi bilstein offers the required quality:

- The clutch release fork is manufactured in-house at our production facilities in Ennepetal in accordance with strict requirements for precision and fitting safety.
- The functional dimensions are guaranteed by in-house production, machining and quality assurance.
- Additional examinations of the material and structure ensure absolute certainty when selecting the cast material.

febi no. 29581

Reference no. 1392 537
to fit DAF 75CF, CF75, 85CF, CF85, 95XF,
XF95

febi no. 40169

Reference no. 1438 641
