Explanation:

On different models from the Fiat group, equipped with the 1.9 JTD engine and air conditioning compressor in the drive, several adjustments have been made to the accessory drive system since its introduction.

Belt length, tensioner and pulleys have undergone small changes for continuous improvement on the drive performance.

As a result, the Fiat group now only offers 1 belt size for this drive:
The OE/OES references are 55189679 and 71734476.
The Gates Micro-V® replacement belt is **6PK1835XQ**.

This means that the 6PK1840, previously recommended for some of these applications, should no longer be installed on this 1.9 JTD + AC drive. For correct actual applications, please check our online catalogue.
