

632003 And 632004 front sensor function

On Valeo Beep&Park systems please note that kit numbers 632003 and 632004 both use the rear gear engagement system, meaning that once the rear gear has been engaged, the front sensors will activate for thirty seconds. Once thirty seconds has passed it is necessary to reengage the reverse gear in order to activate the front sensors again.

Please note the beep and park systems are designed as a parking aid and not a driving aid.

Parking sensors are active for thirty seconds once the rear gear has been engaged.
