

Can I have confidence in the quality of First Line Range?

Absolutely, as First Line is committed to safety and performance and works closely with its manufacturers to ensure the highest standards are met. As part of the quality control, products are tested to guarantee high standards are maintained during hostile operating environments.

As you would expect from a premium quality supplier, all First Line Turbo Hoses are covered by a 2 year 24,000 mile warranty. Terms and conditions apply, see warranty statement for details.

About First Line

Established in 1983, First Line Ltd is a renowned and trusted world-wide supplier of premium quality automotive components to the vehicle aftermarket. The product portfolio includes an extensive range of chassis, engine and braking components consisting of over 36,000 part numbers across 47 different product groups and is focussed on introducing up to 250 new references every single month.

The First Line premium range of Turbo Hoses offers the aftermarket one of the most comprehensive ranges available. This leading range contains over 600 part numbers providing an extremely comprehensive coverage for the global vehicle parc.

More importantly all First Line Turbo Hoses are supplied with the exact OE connection therefore distributors and repairers alike can have complete confidence that they are getting the very best specification of products at very competitive prices.

Product Identification

Traditionally thought of as a Dealer only product, First Line enables its customers to source their Turbo Hoses from the independent aftermarket, which not only means that a significant amount of time can be saved but also cost.

When it comes to Turbo Hoses, product identification can be quite challenging as it is extremely difficult to explain to a supplier over the phone which Hose you are in need of.

To help overcome this First Line have created technical layout drawings for every application, therefore you can be sure to pinpoint exactly what you need.

These images can be seen on First Line's webcat, plus they are also viewable in MAM AutoCat and TecDoc. Therefore, no matter what your choice of parts identification you will be able to quickly and easily supply the correct Turbo Hoses reducing the need to source from the OE Dealer.

OE Hose Clips

To supplement First Line's range of OE specification Turbo Hoses, a range of 20 premium quality hose clips are also available. There are two different versions, the 1000 series and the heavy duty 1100 series.

The 1000 series is a premium quality range of 12mm wide stainless steel, spring-loaded, constant tension clamp clips that consists of eight part numbers and caters for diameters from 30-110mm.

The 1100 series provides an 18, 20 & 25mm wide heavy duty bolt clamping option, consisting of 12 part numbers, and due to the precise nature of the bolted clamp, covers diameters from 34-85mm, often used on the end of the Hose which fits directly to the Turbo.

→ The 1000 series can be purchased singularly or in packs of 10.

→ The 1100 series can be purchased singularly or in packs of 5.
